

Remco Product Selection Guide

Vikan Hand Brushes

Remco is the exclusive Vikan Partner in the United States and Canada

Bristle Options

■ **Soft** — Bristles are longer and thinner than other types; ideal for sweeping dry, fine particles like flour and sugar

■ **Medium** — Suitable for wet and dry applications; great for sweeping larger food particles such as peelings

■ **Stiff** — Bristles are shorter or thicker; perfect for scrubbing difficult dirt and for wet use with cleaning agents

■ **Soft/Split** — Soft bristle with split ends; split bristle fibers hold more water and cleaning agent to achieve a maximum washing effect

Block Options

■ **Bench/Countertop** — Narrow block with soft or medium bristles used for sweeping and cleaning counter and bench tops

■ **Hand/Scrub** — Ergonomic hand grips allow for tough scrubbing without hand fatigue

■ **Long Handle** — Ergonomic long handle helps reach into hard to reach spaces, turns into a scrub brush when turned around to grasp the brush head

■ **Short Handled** — Ergonomic grip prevents hand fatigue and brush head promotes scrubbing and washing motions. Can be used with the short handle or by gripping the brush head

■ **Dish** — Ergonomically designed handle with raised grip angle promotes quick and effective cleaning in dish-washing applications

■ **Utility/Misc.** — These brushes allow for specialized cleaning, in areas where a specific brush is applicable

Staple Set vs UST

UST's unique design and construction improves bristle retention and allows for significantly more effective cleaning of the product itself.

Scrubbing Hand Brushes

- Scrub brushes require pressure applied directly to the brush block. This makes these brushes suitable for areas where the cleaning surface is within arm's reach. These brushes are often used to scrub tables, conveyor belts, chopping boards, buckets, and large-scaled bowls. The angled bristles are preferred when it is necessary to reach into corners.
- The detail brush can reach into tight areas and corners and can be held by the handle or by the block. It is suitable for cleaning in and around gaskets, rubber strips and joints on machinery.
- The nail brush is effective at cleaning hands and arms. It also works well on small table tops.

Bench Hand Brushes

- The narrow hand brush is a good choice for cleaning in narrow areas. Common uses include cleaning where the conveyor belt meets the sides of the conveyor, rubber seals of refrigerators, etc.
- UST bench brushes are intended for sweeping particles from conveyor belts, food preparation surfaces, tables and equipment, most notably in high-risk areas where hygiene is critical.
- The counter brush is designed to dust or brush dry, fine particles on large surface areas like tables and equipment.
- Bench brushes provide excellent sweeping performance with a variety of bristle types to accommodate different particle types (fine, large, damp, dry). They may also be used as a dust pan brush.

Short Handled Hand Brushes

- Raised-handle brushes are ergonomic hand brushes suitable for cleaning tables and equipment. The split bristle option holds water in the brush for a longer time, ensuring a good washing effect.
- The UST short-handled hand brush is designed for cleaning conveyor belts, production lines, machinery and food preparation surfaces, particularly in high risk areas. The angled and circular arrangement of the Bristle Security Units ensures efficient cleaning.
- Short-handled hand brushes come in three bristle types making them suitable for use on all types of equipment, tables and walls. The soft/split brush is best suited for washing very sensitive areas, like washing glass, stainless steel and Plexiglas.

Long-Handled Hand Brushes

- The utility brush is ergonomically designed with a raised handle to reduce the risk of injury. It is suitable for cleaning small surface areas, tables, pots, cutting boards, etc.
- Long-handled hand brushes allow for easy access into machines, deep buckets, containers or anywhere that may require longer reach.
- UST long-handled hand brush is effective at cleaning machines, buckets, containers and tubs in high-risk areas.
- The dish brushes use an angled handle and bristles for cleaning dishes, small areas on equipment, etc. The dish brush scraper loosens stubborn debris.

Special Application Brushes

- The brush with hand guard is for use with a bowl cutter. The hand guard protects the user's hand from being cut, allowing the machine to be cleaned without being disassembled.
- Pastry brushes, available in three widths, are great for use with pastries when applying egg, oil, butter, etc.
- The bottle brush is used for cleaning large tubes, valves, and bottles. It is often used as a multipurpose scrub.
